

CTI® CUSTOM

Introduced in 1983, CTi remains the cornerstone of our ligament bracing product line today. While the original CTi has evolved over time, our basic philosophy remains unchanged – a static support system consisting of a rigid frame will hold the bones in proper alignment and provide high level of control to prevent displacement. The constant development and improvement of this classic design is why the CTi remains the top choice of athletes and leading physicians around the world.

The rigid, carbon composite CTi knee brace frame captures the tibia, providing the brace-to-bone contact needed for maximum stabilization of the knee joint. The non-elastic cruciate strapping combined with a rigid frame that truly captures the tibia, results in a static support system.

The CTi Custom is generally used for high levels of support where comfort and strength are not compromised with weight and bulkiness. It can also offer greater advantages for accurate fitting where leg shape abnormalities present a problem.
